Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 31st March 1950

REPORT

Summary.—The birth-rate in the first quarter of 1950, while lower than that for the corresponding quarters of the years 1947, 1948 and 1949, is higher than the average of those in the first quarters of the five years immediately preceding the war.

The marriage-rate is above the corresponding quarter of 1949 and considerably above the pre-war average.

The death-rate shows a slight improvement compared with the first quarter of 1949 and compared with the average.

The infant mortality rate continues to improve and the rate for this quarter is the lowest experienced in Scotland for any first quarter.

The death-rate from tuberculosis shows an improvement, both in the respiratory and non-respiratory forms, and is lower than those prevailing immediately before the war.

The number of mothers who died from puerperal causes was 23. The maternal mortality is the lowest experienced in any first quarter in Scotland.

Live Births.—The 23,539 births in the quarter under review are 691 fewer than in the corresponding quarter of 1949. The rate per 1,000 population is 18·5, being 0·5 below the rate for the corresponding quarter of 1949 and 1·1 below the average. The birth-rate in the aggregate of large burghs is 18·5, the same as for the rest of Scotland. In individual areas the rate ranged in burghs from 27·3 in Port Glasgow, 25·1 in Clydebank and 23·3 in Coatbridge to 16·3 in Stirling, 15·4 in Ayr and 14·7 in Falkirk. In counties exclusive of large burghs it ranged from 22·1 in West Lothian, 20·4 in East Lothian and in Stirling and 20·0 in Fife.

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—Beginning with the first quarter of 1950 these rates are calculated on the estimated home population of Scotland, or of the local area concerned, as the case may be. Previously, as indicated in the relative Reports, they were variously calculated with reference either to what was referred to as a total population or to a civilian population. The estimated home population is the civilian population (including members of the Mercantile Marine at home and abroad) plus members of the armed forces stationed in the country.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In previous Returns from 1941 classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

The proportion of illegitimate births, 5.0 per cent., is 0.7 below that for the first quarter of 1949 and 1.5 below the average.

Of the 23,539 births registered, 12,104 were of male children and 11,435 of female children, being 1,059 male births per 1,000 females. Births registered in January numbered 7,812, in February 7,307 and in March 8,420, the equivalent birth-rates being 17.8, 18.5 and 19.2 respectively.

Still-Births.—The number of still-births registered during the quarter was 672 and is equivalent to a rate of 28 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 11,114, is 476 more than for the first quarter of 1949. The rate per 1,000 population was 8.7. It is 0.3 above that for the corresponding quarter of 1949 and 2.3 above the pre-war five years' average (1935-1939). The rate in the aggregate of large burghs is 10.3 compared with 6.9 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 15.6 in Inverness, 15.5 in Rutherglen and 13.5 in Perth to 8.2 in Dunfermline, 7.9 in Arbroath and 6.7 in Dumbar-ton. In counties exclusive of large burghs it ranged from 10.0 in West Lothian, 9.6 in Clackmannan and 9.2 in Selkirk to 4.7 in Ross and Cromarty and in Zetland, 3.1 in Inverness and 2.6 in Kinross.

Of the 11,114 marriages registered, 1,973 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 2 were irregular marriages registered on the authority of Decree of Declarator pronounced in the Court of Session. The remainder, 9,139 were solemnised by a minister of religion. In the corresponding quarter of 1949 civil marriages numbered 1,912 and those with a religious ceremony numbered 8,719.

Marriages registered in January numbered 2,946, in February 2,800 and in March 5,368, the equivalent marriage-rates being 6.7, 7.1 and 12.3 respectively.

Deaths.—Deaths registered during the quarter numbered 18,646, and equalled a death-rate of 14.7 per 1,000 population. They are 576 fewer than were registered in the first quarter of 1949. The rate is 0.4 less than in that quarter, and 0.3 below the five years' average. The death-rate in the aggregate of large burghs is 14.8 compared with 14.5 in the rest of Scotland. The rate in individual large burghs ranged from 19.0 in Arbroath, 18.1 in Port Glasgow and 16.9 in Kirkcaldy to 13.2 in Dumbar-ton, 13.1 in Hamilton and 11.7 in Coatbridge. In counties exclusive of large burghs it ranged from 21.9 in Zetland, 20.0 in Orkney and 18.5 in Selkirk to 12.9 in Banff, 11.9 in Moray and 11.2 in West Lothian.

Deaths registered in January numbered 6,073, in February 6,549 and in March 6,024, the equivalent death-rates being 13.9, 16.6 and 13.8 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 1,080 and are equivalent to an infant mortality rate of 46 per 1,000 registered live births. This rate is 5 less than for the corresponding quarter of 1949 and 14 below the five years' average. Among legitimate children the mortality was 44 per 1,000 births and among illegitimate children 73.

The infant mortality for the large burghs was 47, while for the rest of Scotland it was 44. In the large burghs individually it ranged from 98 in

Airdrie, 88 in Arbroath and 79 in Dumfries to 28 in Dunfermline, 26 in Aberdeen and 24 in Inverness. In counties exclusive of large burghs it ranged from 107 in Nairn and in Wigtown, 97 in Kinross and 65 in Selkirk to 22 in Roxburgh, 18 in Caithness and 8 in Kincardine.

The neo-natal rate (deaths of infants under one month) was 25 per 1,000 live births and is 1 below that for the corresponding quarter of 1949.

Causes of Death.—Principal Epidemic Diseases.—There were 294 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 62 fewer than in the first quarter of 1949. The death-rate for this group is 23 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 30. These deaths include 9 from cerebro-spinal fever, 4 from scarlet fever, 22 from whooping-cough, 256 from influenza and 3 from measles. No deaths were registered from typhoid and paratyphoid fevers or from diphtheria. In the large burghs the highest rates were 58 in Kirkcaldy, 48 in Kilmarnock and 40 in Perth. In counties exclusive of large burghs the highest were 111 in Inverness, 93 in Orkney and 87 in Sutherland.

Tuberculosis.—The 826 deaths from all forms of tuberculosis are 171 fewer than in the first quarter of 1949. Of them 735 were ascribed to tuberculosis of the respiratory system and 91 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 65 per 100,000, that from respiratory tuberculosis being 58. The former rate is 13 below that for the corresponding quarter of 1949 and the latter is 12 below. The rates from all forms and from the respiratory form are respectively 16 and 9 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,482, and equal a rate of 195 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death these deaths are 4 fewer than in the first quarter of 1949, but the rate is 12 above the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 884 and from pneumonia 838. The corresponding death-rates per 100,000 population are 70 and 66. The average rates for the corresponding quarters of the previous five years are 84 and 75 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 23 and are equal to a rate of 1.0 per 1,000 live births. This rate is 0.6 below that for the corresponding quarter of 1949 and 1.2 below the five years' average. Including still-births the maternal death-rate is 0.9 per 1,000.

Violence.—Deaths from violence numbered 645, and are equivalent to a death-rate of 51 per 100,000. In the first quarter of 1949 the number was 687 and the rate 54. Of the total deaths assigned to violence 120 were attributed to road transport accidents, a decrease of 16 compared with the corresponding quarter of 1949.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the first quarter of 1950 and in the corresponding quarter of 1949 with the average rates for the first quarter of the years 1945-1949.

CAUSE OF DEATH.	Death-rates per 100,000 Population.

METEOROLOGICAL NOTES**Supplied by the Meteorological Office, Edinburgh****JANUARY 1950**

Mild unsettled weather of the first fortnight contrasted sharply with the cold and frost which followed. Despite persistent rains at the outset and moderate falls of snow at the close, the month was the driest January since 1941. Sunshine aggregates were about normal for mid-winter.

The mild south-westerly type of weather which characterised December 1949 continued almost unbroken until the middle of January. Thereafter, all districts came under the influence of very cold air from the Continent causing hard frosts in many districts towards the end of the month. The resulting mean temperature (39.9° F.) was one degree above average. The mildest weather was experienced from the 7th–12th when temperature rose to 50–55 degrees or above in places. On the 10th or 11th both Achnashellach and Auchincruive registered 58 degrees, the highest January reading in Scotland for twelve years. In the coldest period, 21st–25th, day maxima were occasionally near or below freezing in East Scotland, e.g. at Peebles, West Linton, Dyce and Braemar. Night frosts were severe on the 22nd when 25 degrees of frost was recorded at Glenlivet in Banffshire. Ground frosts were frequent after the 15th, but, owing to the mildness of the nights in the first fortnight, there were eleven occasions when no ground frost occurred anywhere in Scotland.

Rain fell frequently during the first 15 days and moderate falls of snow were experienced at the end of the month. Most districts had their heaviest snowfalls for two years, many places having 2–6 inches of snow on the 30th–31st. Drifts two feet deep were reported near Drumochter on the border of Perthshire and Inverness-shire. The third and fourth weeks, however, were mainly dry though light showers fell locally. Total precipitation for the month was below average in practically all areas except over the coastal strip from Wick to Aberdeen. Along the coast to the South and also in the South-west totals were only about three-quarters of normal. Daily falls exceeding an inch were confined mainly to the 5th and 6th when heavy rains fell over a large area of Scotland. Considerable flooding resulted on roads in East Sutherlandshire and also in the glens in Argyll. The largest measurements for 24 hours were 2.58 inches at Glenquoich, 2.53 at Kilmacolm and 2.47 at Fort William on the 6th.

Slightly less than the normal sunshine was recorded in the South-east and North-west, Angus and Fife having the greatest deficiencies. St. Andrews and Leuchars had their dullest January since 1942. Low-lying districts in the Moray Firth returned the best records. Nairn's aggregate (66 hours) equalled that of January 1946. This is the highest for this station in January since 1932. Other good records were Forres (63), Fortrose (59), Balerno (58), Inverness (57), Edinburgh (57) and Banff (56). The lowest totals included Fort William (12 hours), Greenock (14), Benbecula (19) and Tiree (19).

There was a good deal of fog in January but thunder occurred only sporadically. Gales were numerous and those of the 6th and 31st were severe in the North and West.

Meteorological Notes (continued).

FEBRUARY 1950

A cool month with a mild period in the third week. Persistent rains during the first three weeks and frequent snow showers raised totals of precipitation to well above average, but sunshine records were in excess over most parts of the country.

Cold wintry weather prevailed through the greater part of February giving a mean temperature (38.6° F.) below average, thus breaking a long run of mild months which began in September 1948. In Southern districts the deficiency was small though it amounted to one or two degrees or more to the North. The coldest days were the 1st and 24th–27th when unusually severe night frost was experienced at inland stations. On the 1st night minima fell to 8° – 9° F. at West Linton and near Lauder, while Glenlivet had 6° F. and Balmoral 8° F. on the 27th. The thermometer stood below freezing during the day on the 24th or 25th. At Lerwick and Balmoral temperature, however, rose frequently to 40–45 degrees and even exceeded 50 degrees in the period 15th–18th. A reading of 56 degrees was reported from Greenock on the 17th and also at Dyce, Montrose, Leuchars, St. Andrews and North Berwick on the 16th. Ground frosts were registered on every night except the 17th, low ground minima being 3° F. at Glenlivet on the 27th and 3° – 4° F. at West Linton and Braemar on the 1st.

Sunshine was abundant everywhere and many observers in East Scotland recorded an excess of more than 30 hours. Craibstone had its sunniest February since records began in 1925. The brightest periods were the 5th, 12th–14th and the last week. On the 27th and 28th the sun shone for over 9 hours in many districts. The best records were 123 hours at Arbroath followed closely by Craibstone (121), Dyce (119), Mannofield, Aberdeen (116) and Leuchars (113).

Precipitation was persistent in all districts but the last week was mainly fair while hardly any rain fell on the 5th, 21st and 22nd. Totals for the month showed a moderate to large excess, some places in the Western Highlands having 10–12 inches in all. Lerwick, with 5.09 inches, had its wettest February since 1931 and Kelso (3.07 inches) its wettest since that of 1930. Much of the precipitation was in the form of snow or sleet. Snow blocked many roads at the beginning and there were moderate falls on the 8th and also later in the month. Thawing snow, added to heavy downpours on the 16th and 17th, caused a good deal of flooding in Western, Central and Border districts. On the first date the Earn rose at the rate of 2 feet per hour and by the 17th the Tay at Aberfeldy had risen $11\frac{1}{2}$ feet. The largest rainfall in 24 hours were 3.93 inches at Kinloch Hourn on the 17th and 3.72 and 3.70 respectively at Conaglen and Glenquoich on the 16th.

Fog occurred more frequently than in any February since 1942. Outbreaks of thunder were confined mainly to Western districts but gales were widespread and numerous, the stormiest periods being 1st–4th, 7th–18th, 21st, 22nd and 27th.

Meteorological Notes (*continued*).**MARCH 1950**

A very mild month with a cold period in the second week. Sunshine records were well above average in East Scotland and there was less rain than usual over most of the country.

Apart from a cold spell of northerly winds from the 10th–14th, March was an exceedingly mild month. Both day and night readings were high for the season, mean temperature for the whole country reaching 44.8° F., 4 degrees above average. There have been only three warmer March months since systematic recording began nearly one hundred years ago. Day maxima exceeded 60 degrees in many districts in the very mild spells from the 4th–8th and 23rd–28th and reached 65 degrees at Glenlivet and 64 at Balmoral on the 7th while Penicuik had 65 degrees and Peebles 63 on the 26th. In contrast day maxima of 35–40 degrees were widely reported towards the end of the second week. At Braemar and Dalwhinnie day temperatures reached only 33 degrees on the 13th. Severe frosts occurred inland that night, 15 degrees of frost being registered in the screen at both Dalwhinnie and Eskdalemuir. The lowest ground minima were 10–12 degrees F. at Auchincruive and Dalwhinnie on the 14th and at Glenlivet on the 1st and 28th.

Along the coastal fringe from Peterhead to the Borders, sunshine aggregates were 20–30 hours better than average, most stations having their sunniest March since 1933. Deficiencies of the same order occurred locally in the dullest areas which lay in Dumfriesshire, Argyll and the Great Glen. The brightest period was the 23rd–27th. On the latter day over 11 hours' bright sunshine was enjoyed at Benbecula and at Duntuilin in Skye. The best records were Arbroath (146 hours), St. Andrews (145), Leuchars (143), Edinburgh (135) and Craibstone (135). Amongst the poorest aggregates were Fort William (58), Onich (64), Stornoway (73) and Duntuilin (74).

March was a dry month in most inland areas, some places having little more than half the normal amounts. Along the East Coast and locally in the North and West, however, there was a moderate excess in rainfall. The periods 4th–8th and 23rd–30th were mainly dry in all areas. The wettest days were the 1st, 16th–19th and the 22nd. On the 18th several measurements exceeded 2 inches and flooding resulted in places. Heavy rains in Eastern districts on that day accounted for about half the month's quota. Amongst the largest falls on the 18th were 2.46 inches at Glenkiln Reservoir, 2.25 at Ruthwell and 2.24 at Drumlanrig.

Snow and sleet showers occurred on the 12th–14th while snow lay to a depth of an inch or so in the North.

Winds rose to gale force on 16 days, the stormiest period being the 15th–19th. Little thunder occurred but there was a good deal of fog around the 6th–7th and 21st–22nd.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGH OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 31ST MARCH 1950.

Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 30th June 1950

REPORT

Summary.—The birth-rate is lower than the average of the corresponding quarters of the previous five years but is equal to the average of the years immediately preceding the war.

The marriage-rate is the lowest experienced in any quarter since the first quarter of 1939 and lower than the pre-war average.

The death-rate shows a slight improvement compared with the second quarter of 1949 and compared with the average.

The infant mortality rate is the lowest recorded in Scotland for any quarter.

The death-rate from both respiratory and non-respiratory tuberculosis shows substantial improvement.

Deaths from puerperal causes numbered 28, giving a maternal mortality rate lower than that for any previous second quarter in Scotland.

Live Births.—The 24,640 births in the quarter under review are 784 fewer than in the corresponding quarter of 1949. The rate per 1,000 population is 19.1, being 0.6 below the rate for the corresponding quarter of 1949 and 1.3 below the average. The birth-rate in the aggregate of large burghs is 19.2 as compared with 19.1 for the rest of Scotland. In individual areas the rate ranged in burghs from 24.6 in Clydebank, 23.7 in Port Glasgow and 22.9 in Coatbridge to 17.3 in Dunfermline, 17.0 in Ayr and 16.7 in Edinburgh. In counties exclusive of large burghs it ranged from 22.2 in Wigtown, 21.5 in Clackmannan and 21.3 in West Lothian to 15.2 in Roxburgh, 15.0 in Selkirk and 14.2 in Peebles.

The proportion of illegitimate births, 5.5 per cent., is 0.2 below that for the second quarter of 1949, and 1.1 below the average.

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated home population of Scotland, or of the local area concerned, as the case may be. Prior to the first quarter of 1950, as indicated in the relative Reports, they were variously calculated with reference either to what was referred to as a total population or to a civilian population. The estimated home population is the civilian population (including members of the Mercantile Marine at home and abroad) plus members of the armed forces stationed in the country.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

Of the 24,640 births registered, 12,848 were of male children and 11,792 of female children, being 1,090 male births per 1,000 females. Births registered in April numbered 8,050, in May 8,669 and in June 7,921, the equivalent birth-rates being 19.0, 19.8 and 18.7 respectively.

Still-Births.—The number of still-births registered during the quarter was 658 and is equivalent to a rate of 26 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 8,677, is 532 fewer than for the second quarter of 1949. The rate per 1,000 population was 6.7. It is 0.4 below that for the corresponding quarter of 1949 and 0.9 below the pre-war five years' average (1935-1939). The rate in the aggregate of large burghs is 7.8 compared with 5.5 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 16.9 in Inverness, 10.8 in Dumfries and 10.5 in Perth to 5.8 in Clydebank, 5.7 in Stirling and 5.0 in Dumbarton. In counties exclusive of large burghs it ranged from 7.0 in Orkney, 6.6 in Clackmannan and in Selkirk and 6.3 in Wigtown to 3.9 in Ross and Cromarty, 3.5 in Inverness and 2.2 in Bute.

Of the 8,677 marriages registered, 1,520 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 1 was an irregular marriage registered on the authority of Decree of Declarator pronounced in the Court of Session. The remainder, 7,156, were solemnised by a minister of religion. In the corresponding quarter of 1949 civil marriages numbered 1,526 and those with a religious ceremony numbered 7,679.

Marriages registered in April numbered 3,345, in May 1,394 and in June 3,938, the equivalent marriage rates being 7.9, 3.2 and 9.3 respectively.

Deaths.—Deaths registered during the quarter numbered 14,986, and equalled a death-rate of 11.6 per 1,000 population. They are 288 fewer than were registered in the second quarter of 1949. The rate is 0.2 less than in that quarter, and 0.3 below the five years' average. The death-rate in the aggregate of large burghs is 11.7 compared with 11.5 in the rest of Scotland. The rate in individual large burghs ranged from 16.0 in Arbroath, 12.7 in Rutherglen and 12.6 in Dumbarton, in Dumfries and in Kirkcaldy to 10.0 in Port Glasgow, 9.3 in Falkirk and 9.1 in Airdrie. In counties exclusive of large burghs it ranged from 18.2 in Zetland, 17.5 in Selkirk and 16.1 in Sutherland to 9.7 in Kincardine, 9.5 in Midlothian and 8.1 in Moray.

Deaths registered in April numbered 4,967, in May 5,381 and in June 4,638, the equivalent death-rate being 11.7, 12.3 and 10.9 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 841 and are equivalent to an infant mortality rate of 34 per 1,000 registered live births. This rate is 2 below that for the corresponding quarter of 1949 and 13 below the five years' average. Among legitimate children the mortality was 34 per 1,000 births and among illegitimate children 41.

The infant mortality for the large burghs was 35, while for the rest of Scotland it was 33. In the large burghs individually it ranged from 54 in Ayr, 51 in Arbroath and in Coatbridge and 49 in Motherwell and Wishaw and in Dunfermline to 23 in Port Glasgow, 18 in Edinburgh and 16 in Inverness.

In counties exclusive of large burghs it ranged from 60 in Bute, 53 in Banff and in Inverness and 51 in Roxburgh to 18 in Sutherland, 13 in Perth and 12 in Selkirk. No deaths of children aged less than one year occurred in the counties of Kinross and Peebles.

The neo-natal rate (deaths of infants under one month) was 21 per 1,000 live births and is the same as that for the corresponding quarter of 1949.

Causes of Death.—*Principal Epidemic Diseases.*—There were 97 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 14 fewer than in the second quarter of 1949. The death-rate for this group is 8 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 10. These deaths include 9 from cerebro-spinal fever, 14 from whooping-cough, 1 from diphtheria, 51 from influenza and 22 from measles. No deaths were registered from typhoid and paratyphoid fevers or from scarlet fever. In the large burghs the highest rates were 15 in Dumfries, 13 in Airdrie and 11 in Falkirk. In counties exclusive of large burghs the highest were 88 in Caithness, 40 in Zetland and 37 in Orkney.

Tuberculosis.—The 717 deaths from all forms of tuberculosis are 172 fewer than in the corresponding quarter of 1949. Of them 608 were ascribed to tuberculosis of the respiratory system and 109 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 56 per 100,000, that from respiratory tuberculosis being 47. The former rate is 13 below that for the corresponding quarter of 1949 and the latter is also 13 below. The rates from all forms and from the respiratory form are respectively 24 and 17 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,428 and equal a rate of 189 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death, these deaths are 39 more than in the second quarter of 1949 and the rate is 9 above the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 395 and from pneumonia (including pneumonia of the newborn) 436. The corresponding death-rates per 100,000 population are 31 and 34. The average rates for the corresponding quarters of the previous five years are 34 and 39 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 28 and are equal to a rate of 1.1 per 1,000 live births. This rate is 0.3 below that for the corresponding quarter of 1949 and 1.1 below the five years' average. Including still-births the maternal death-rate is also 1.1 per 1,000.

Violence.—Deaths from violence numbered 619, and are equivalent to a death-rate of 48 per 100,000. In the second quarter of 1949 the number was 662 and the rate 51. Of the total deaths assigned to violence 122 were attributed to road transport accidents, an increase of 20 compared with the corresponding quarter of 1949.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the second quarter of 1950 and in the corresponding quarter of 1949 with the average rates for the second quarter of the years 1945-1949.

CAUSE OF DEATH.	Death-rates per 100,000 Population.		
	1950 Second Quarter.	1949 Second Quarter.	Average rates for Second Quarters 1945-1949.

NEW CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS

The number of new claims to sickness benefit under the National Insurance Acts made at local offices of the Ministry of National Insurance in Scotland during the 13 weeks ended 4th July 1950 was 160,238. The number of such claims made at the sixteen principal towns is shown below.

New Sickness Benefit Claims*		New Sickness Benefit Claims	
in the 13 weeks ended		in the 13 weeks ended	
Town.	4th July 1950.	Town.	4th July 1950.
1. Glasgow . . .	43,918	9. Kirkcaldy . . .	2,097
2. Edinburgh . . .	12,787	10. Coatbridge . . .	2,192
3. Dundee . . .	7,232	11. Kilmarneck . . .	2,225
4. Aberdeen . . .	6,565	12. Hamilton . . .	2,576
5. Paisley . . .	4,056	13. Ayr . . .	2,259
6. Greenock . . .	2,800	14. Falkirk . . .	2,360
7. Motherwell and		15. Dunfermline . . .	2,258
Wishaw . . .	4,370	16. Perth . . .	1,840
8. Clydebank . . .	2,508		<u>102,043</u>

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

APRIL 1950.

April was unsettled and rather cool—the coolest in Scotland since 1941. Marked by persistent showery weather the month was considerably wetter than usual except in coastal areas of East Scotland. Sunshine records were poor in many districts, but Shetland and parts of the East coast had more than the normal April amounts.

Frequent West or North-west winds resulted in mean temperatures being appreciably below average. The deficiency was small in places but it amounted to two degrees or more at Glenbranter, Helensburgh and Inverness. For the whole country the mean value (43.5° F.) was nearly one degree below average and four degrees lower than that of April 1949. Day maxima reached 60° or more on two days—the 21st and 30th. Dyce and Montrose had 60° on the former date while Lossiemouth and Gordon Castle recorded 62° on the latter. In only five other Aprils during the past century has temperature failed to exceed 62° in Scotland. April 24th was the coldest day, maxima rising to only 32° at Glenlivet, 33° at Dalwhinnie and 34° at Lerwick, Balmoral and Braemar. Hard frost occurred that night when 15 degrees of frost was registered in the screen at Dalwhinnie. There, actual ground temperature fell to 7° F.

Precipitation (often in the form of snow) was persistent except in parts of the East coast which had a deficiency of 10-20 per cent. At Banff and Nairn it was the wettest April for about 15 years. Snow, sleet and hail showers fell frequently with northerly winds. At places in the West and North snow lay to a depth of up to 4 inches around the 25th-28th. Heavy rains occurred on April 1st, and also on the 7th-9th, giving Scotland its wettest Easter for many years. At Kinlochquoich the measurement for 24 hours on the 8th was 2.14 inches. Heavy falls on the 1st were 1.94 at Glenquoich and 1.90 inches at Achfary, Loch More.

Cloudy skies predominated though a few places had slightly more than the usual amounts of sunshine. The Shetlands, however, and some eastern districts were favoured. Lerwick with 179 hours (52 hours above average) headed the list with its sunniest April since 1942. Other high records were Wick (171 hours), Tiree (171), St. Andrews (169), Benbecula (167) and Leuchars (165). Amongst the lowest aggregates were Fort William (91), Dalwhinnie (95) and Duntuilum, Skye (96).

There was about the average frequency of fog and of thunder. Gales mainly occurred on April 1st, 7th-9th, 20th and 24th-27th. The most severe were those on the 1st and 7th-9th when wind speed in gusts attained 60-70 miles per hour in exposed places.

Meteorological Notes (continued).**MAY 1950.**

Mean temperature for May was about or slightly above average. There was a long dry period during the first half of the month and rainfall totals over a considerable area were little more than half the normal. Sunshine was abundant in most parts of the country.

Owing to a prolonged spell of easterly and northerly winds, May was a month of only moderate temperature. It was rather cooler than usual in the Lothians and in some Moray Firth districts, but elsewhere mean values mainly exceeded average. For the whole country, the calculated mean was 50.5 degrees. During the warmest spell, the 10th-13th, maxima rose to 80 degrees at Colmonell and Ruthwell and to 79 degrees in Glasgow. A number of places in the South and East recorded their highest readings on the 31st. The arrival of cold air from the North about the 15th lowered temperatures considerably and slight to keen night frosts were reported. At Dalwhinnie, Lerwick and Glenlivet day readings rose to only 40-43 degrees on the 17th or 19th. The lowest night minima were 23° F. at Dalwhinnie on the 15th, 16th and 25th, and 27° F. at Glenlivet on the 20th. Actual ground temperature fell to 15° F. at Dalwhinnie on the 16th.

Brilliant sunshine from the 6th-18th and 24th-26th raised aggregates well above average over much of Scotland. At Baltasound and Lerwick, for example, the excess was 60-65 hours. Bright sunshine averaged 14 hours per day at Benbecula from the 6th-15th. Though persistent easterly winds kept the excess lower at some stations, returns in most cases were up to those recorded in May 1949 but the month was considerably duller than either May 1948 or May 1946. The highest aggregates were Benbecula (249 hours), Stornoway (237), Troon (234), Baltasound (233), Prestwick (229), Tiree (225) and Lerwick (216).

The month was unusually dry, rain falling on only about ten or twelve days. There was a long dry spell from the 3rd-15th and a shorter period around the 25th. Considerable areas had roughly 50 per cent. of average while over Scotland generally it was the driest May since 1940. Wick (0.72 inch) and Gordon Castle (0.83 inch) had their lowest May totals for about 15 years. The heaviest falls occurred on the 1st, 16th, 17th and 20th but measurements exceeding an inch in 24 hours were not numerous. The largest were 1.67 inches at Craigcleuch, near Langholm, 1.46 at Kingairloch, 1.43 at Glencoe Gardens, all on the 1st, and 1.54 at Dalcross, near Inverness, on the 17th.

Snow and sleet showers fell locally with northerly winds. Gales occurred on only one day, the 29th. The frequency of thunder was below average, but there was a good deal of fog which was prevalent in coastal areas on 14 days in all.

Meteorological Notes (continued).**JUNE 1950.**

An outstanding feature was the hot spell during the first week. Though much cooler weather prevailed later in the month, it was the mildest June for ten years. Central and East Scotland was dry and sunny, but dull showery weather was experienced to the North-west.

Mean temperature was appreciably above average in all districts, the mean for the whole country (58.1° F.) being about 3 degrees above average. At Banff, Craibstone and Edinburgh the excess exceeded four degrees. High pressure maintained mainly fine warm conditions until the 12th. Shade readings rose well above 80 degrees at the end of the first week. On the 6th 88 degrees was recorded in Glasgow and Ruthwell, 87 at Tongland and 86 at Paisley, Renfrew and Peebles. That night was probably the mildest in Scotland for many years. High night minima reported were 67 degrees at Glasgow, 65 at Balerno and 64 at Carluke and Craibstone. The coolest weather came with north-westerly winds on the 13th-23rd, but day maxima rose to 50 degrees in most districts. Only a few stations—mostly high level ones—experienced night readings below 40 degrees, the lowest being 31 degrees at Dalwhinnie on the 21st and 33-35 at Eskdalemuir, Braemar and Balmoral on the 19th. Actual ground temperature fell to 24-25 degrees at Dalwhinnie on the 14th, 19th and 21st.

Most districts south of a line Aberdeen-Glasgow had plentiful sunshine, but cloudy skies predominated to the North-west. There were, however, several exceptionally sunny days in all parts of Scotland, the 1st, 2nd, 5th, 6th, 11th, 12th and 19th being probably the brightest. Some observers reported 13-15 hours on a number of occasions. The Lothians and Fife had the best records, some totals exceeding average by 23-35 hours. Edinburgh with 240 hours—47 hours above average—had the highest aggregate followed closely by St. Andrews (237), Kirkealdy (237), Dunbar (237), Leuchars (236) and North Berwick (236). In the duller areas to the North many observers failed to register 150 hours for the month. Amongst the lowest were Fort William (109), Duntulm (116), Stornoway (118) and Onich (120).

Total rainfall was well below average in Central and East Scotland, some areas having less than half the usual June amounts. Persistent showery weather, however, gave a well-marked excess in the North and West. The driest places in the East had less than one inch for the month contrasting with 8-10 inches at the wettest stations in the West. Little rain fell during the first twelve days but appreciable amounts were recorded between the 13th and 23rd and further rains occurred towards the close of the month. The 28th was a very wet day everywhere in Scotland, measurements exceeding an inch being widely reported. Among the largest for 24 hours were 3.25 at Glencoe Gardens, 2.72 at Ardgour, 2.69 at Onich, 2.56 at Broadford in Skye and 2.53 at Achnashellach.

Gales were reported on the 28th-29th but no exceptionally high gusts were registered. There was relatively little fog in June and rather less than the usual frequency of thunder.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGH OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 30TH JUNE 1950.

	Estimated Home Population 30/6/50.	Births (living children).		Mar-riages.	Deaths.		Rates per 1000 of Home Population.				Infant Mor-tality. Rate per 1000 Live Births.	Still-births per 1000 Births (including Still-births).

Quarterly Return

of the

Births, Deaths and Marriages registered in Scotland
for the Quarter ended 30th September 1950

REPORT

Summary.—The birth-rate in the third quarter of 1950, while lower than any experienced since 1945, approximates closely to rates recorded in the years immediately prior to the war.

The marriage-rate was lower than in recent years.

The death-rate differs little from the average of the past five years.

The infant mortality-rate is the lowest recorded in Scotland for any quarter.

The death-rates from respiratory and non-respiratory tuberculosis continue to show improvement. The rates for both forms are better than the average.

Live Births.—The 22,496 births in the quarter under review are 828 fewer than in the corresponding quarter of 1949. The rate per 1,000 population is 17·3, being 0·6 below the rate for the corresponding quarter of 1949 and 1·7 below the average. The birth-rate in the aggregate of large burghs is 17·2 as compared with 17·3 for the rest of Scotland. In individual areas the rate ranged in burghs from 24·4 in Port Glasgow, 21·1 in Coatbridge and 21·0 in Arbroath to 14·4 in Ayr, 14·2 in Rutherglen and 13·3 in Dunfermline. In counties exclusive of large burghs it ranged from 20·6 in Caithness, 20·0 in Sutherland and 19·9 in Clackmannan to 13·4 in Peebles, 12·8 in Bute and 12·7 in Roxburgh.

The proportion of illegitimate births, 5·3 per cent., is 0·2 below that for the third quarter of 1949 and 1·1 below the average.

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated home population of Scotland, or of the local area concerned, as the case may be. Prior to the first quarter of 1950, as indicated in the relative Reports, they were variously calculated with reference either to what was referred to as a total population or to a civilian population. The estimated home population is the civilian population (including members of the Mercantile Marine at home and abroad) plus members of the armed forces stationed in the country.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the corresponding quarters of the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

Of the 22,496 births registered, 11,591 were of male children and 10,905 of female children, being 1,063 male births per 1,000 females. Births registered in July numbered 7,791, in August 7,370 and in September 7,335, the equivalent birth-rates being 17·7, 16·8 and 17·2 respectively.

Still-Births.—The number of still-births registered during the quarter was 627 and is equivalent to a rate of 27 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 11,846, is 941 fewer than for the third quarter of 1949. The rate per 1,000 population was 9·1. It is 0·7 below that for the corresponding quarter of 1949 and the same as the pre-war five years' average (1934-1938). The rate in the aggregate of large burghs is 10·6 compared with 7·3 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 15·9 in Inverness, 15·6 in Perth and 12·8 in Hamilton to 7·9 in Greenock, 7·6 in Clydebank and 7·1 in Dumbarton and in Port Glasgow. In counties exclusive of large burghs it ranged from 10·0 in Caithness, 9·6 in West Lothian and 9·3 in Kinross to 4·5 in Ross and Cromarty and in Sutherland, 4·1 in Bute and 2·8 in Inverness.

Of the 11,846 marriages registered, 1,922 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939, while 2 were irregular marriages registered on the authority of Decree of Declarator pronounced in the Court of Session. The remainder, 9,922, were solemnised by a minister of religion. In the corresponding quarter of 1949 civil marriages numbered 2,027 and those with a religious ceremony numbered 10,759.

Marriages registered in July numbered 4,643, in August 3,455 and in September 3,748, the equivalent marriage-rates being 10·6, 7·9 and 8·8 respectively.

Deaths.—Deaths registered during the quarter numbered 13,341, and equalled a death-rate of 10·2 per 1,000 population. They are 222 more than were registered in the third quarter of 1949. The rate is 0·1 more than in that quarter, but 0·1 less than the five years' average. The death-rate in the aggregate of large burghs is 10·3 compared with 10·2 in the rest of Scotland. The rate in individual large burghs ranged from 11·7 in Dundee, 11·6 in Inverness and 11·2 in Kilmarnock, Dumfries and in Paisley to 8·0 in Dunfermline, 7·8 in Port Glasgow and 7·7 in Hamilton. In counties exclusive of large burghs it ranged from 14·0 in Kinross, 13·4 in Zetland and 13·3 in Berwick to 8·3 in West Lothian, 8·2 in Stirling and 7·1 in Nairn.

Deaths registered in July numbered 4,613, in August 4,335 and in September 4,393, the equivalent death-rates being 10·5, 9·9 and 10·3 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 737 and are equivalent to an infant mortality rate of 33 per 1,000 registered live births. This rate is 2 below that for the corresponding quarter of 1949 and 10 below the five years' average. Among legitimate children the mortality was 32 per 1,000 births and among illegitimate children 40.

The infant mortality for the large burghs was 34, while for the rest of Scotland it was 31. In the large burghs individually it ranged from 83 in Inverness, 54 in Coatbridge and in Greenock and 44 in Kirkcaldy and in Hamilton to 20 in Falkirk, 17 in Clydebank and 13 in Kilmarnock. In counties exclusive of large burghs it ranged from 57 in Kinross, 53 in Stirling and 52 in Kincardine to 15 in Bute, 14 in East Lothian and 12 in Perth and in

Wigtown. No deaths of children aged less than one year occurred in the counties of Nairn and Peebles.

The neo-natal rate (deaths of infants under one month) was 22 per 1,000 live births and is 1 above that for the corresponding quarter of 1949.

Causes of Death.—*Principal Epidemic Diseases.*—There were 36 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 2 more than in the third quarter of 1949. The death-rate for this group is 3 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 5. These deaths include 4 from cerebro-spinal fever, 9 from whooping-cough, 1 from diphtheria, 13 from influenza and 9 from measles. There were no deaths from typhoid, paratyphoid or scarlet fevers. In the large burghs the highest rates were 14 in Inverness, 9 in Clydebank and 8 in Coatbridge. In counties exclusive of large burghs the highest were 40 in Zetland, 36 in Orkney and 16 in Moray.

In addition to the deaths mentioned above, 38 deaths were registered from acute poliomyelitis. This is equivalent to a death-rate of 3 per 100,000 of the population. There were 7 deaths from this cause in the previous quarter and 3 in the corresponding quarter of 1949. In the third quarter of 1947 when the disease was prevalent 84 deaths were recorded.

Tuberculosis.—The 564 deaths from all forms of tuberculosis are 203 fewer than in the third quarter of 1949. Of them 477 were ascribed to tuberculosis of the respiratory system and 87 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 43 per 100,000, that from respiratory tuberculosis being 37. The former rate is 16 below that for the corresponding quarter of 1949 and the latter is 14 below. The rates from all forms and from the respiratory form are respectively 22 and 17 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,426 and equal a rate of 186 per 100,000. Allowing for change in classification introduced by the Sixth Revision of the International Lists of Diseases and Causes of Death these deaths are 3 more than in the third quarter of 1949. The rate is the same as in that quarter but 6 more than the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 221 and from pneumonia (including pneumonia of the newborn) 352. The corresponding death-rates per 100,000 population are 17 and 27. The average rates for the corresponding quarters of the previous five years are 19 and 27 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 33 and are equal to a rate of 1.5 per 1,000 live births. This rate is 0.6 above that for the corresponding quarter of 1949 but 0.2 below the five years' average. Including still-births the maternal death-rate is 1.4 per 1,000.

Violence.—Deaths from violence numbered 646, and are equivalent to a death-rate of 50 per 100,000. In the third quarter of 1949 the number was 599 and the rate 46. Of the total deaths assigned to violence 150 were attributed to road transport accidents, an increase of 21 compared with the corresponding quarter of 1949.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the third quarter of 1950 and in

the corresponding quarter of 1949 with the average rates for the third quarter of the years 1945-1949.

METEOROLOGICAL NOTES**Supplied by the Meteorological Office, Edinburgh****JULY 1950.**

The past month was mainly mild and sunny but excessive rain fell over much of the country. An anticyclone gave fair weather until the 7th but thereafter the weather was mainly unsettled.

July was a month of equable temperatures. There was no spell of exceptional warmth with the thermometer at the high levels attained in July in recent years. The highest readings reported were 74° F. at Auchincruive and Liberton (Edinburgh) on the 7th and 14th respectively and 73° F. in several districts on the 9th, 10th and 20th. These are the lowest July readings registered in Scotland since 1922. Day maxima seldom fell much below 60° F. but the nights of the 2nd, 3rd, 6th, 28th and 29th were rather cold with minima below 35° F. at high level stations. The reading of 32° at both Dalwhinnie and Balmoral on the 6th was the lowest July screen minimum in Scotland since 1939. Slight ground frost occurred locally, Glenlivet having the lowest ground temperature (23° F. on the 28th).

Little rain fell in the first week but thereafter rains were persistent. Though the precipitation was mainly of the showery type, there were, however, a number of exceptionally wet days, notably the 10th, 13th, 15th and 17th, the largest measurements being 3·97 inches at Loch Sloy Dam, 2·41 at Coiregrogain (Loch Sloy) and 2·16 at Benmore (Loch Eck) on the 13th. On the 17th, 2·23 inches fell at Onich, 2·10 at Fort William, and 2·05 at Ardgour. The month was the wettest July since 1940. Only areas round the Moray Firth and in the extreme South-east had less than the normal rainfall. Most other districts received a moderate to large excess. At Paisley, Renfrew and Colonsay there was more than double the normal, Paisley's total being the highest recorded in July since 1858.

Sunshine was abundant in July, a considerable area having an excess over average of 40 hours or more. The aggregates at Lerwick and Tiree exceeded average by 79 and 62 hours respectively. St. Andrews had its sunniest July for 15 years while Lerwick has had only one sunnier (July 1947) since records began nearly 30 years ago. Seven stations returned totals above 200 hours, viz. Tiree (225), Arbroath (221), St. Andrews (218), Grimsetter (in Orkney) (217), Benbecula (215) and Leuchars (214). In the dullest areas were Benmore, Argyll (115), Dalwhinnie (121), Eskdalemuir (126) and Carlisle (137).

There were only local reports of fog but thunderstorms occurred on 20 days—the highest July frequency for ten years.

Meteorological Notes (*continued*).**AUGUST 1950.**

Unsettled and rather mild South-westerly weather prevailed in August and rain was persistent in most areas. In general, however, only the West received more than the normal rainfall. Despite a large number of rainy days, sunshine records were good over practically the whole country.

Mean temperature (57.8° F.) was only slightly above average for the country as a whole. Day readings were mainly between 60° and 70° F. and occasionally exceeded 70° particularly in the first week. The thermometer rose to 74° on the 3rd or 4th at Kelso, Gordon Castle, Perth and Paisley and Nairn had 74° on the 8th. There were many cool days later in the month temperatures being rather low around the 16th and on the 28th-31st. Night minima were not exceptionally low for the season but fell to 31° or 32° at Glenlivet and Dalwhinnie towards the end of the month. Only local ground frosts were registered in August.

A good deal of the precipitation in August was of the showery character though there were also several very wet days. Much of the rain fell with thunder which was more frequent than in any recent August. There were only a few rainless days in the West and totals for the month showed a moderate excess. On the other hand a considerable area in East Scotland, where rain fell on roughly 16-20 days, was drier than usual. About a hundred observers registered falls of an inch or more in 24 hours, amongst the largest being 2.77 inches at Loch Sloy Dam on the 26th, 2.30 at Crieff on the 24th and 2.00 at Kinlochquoich on the 27th.

As regards sunshine, only a few places returned a small shortage, aggregates in general being 20-30 hours above average. The excess at Stornoway, Tiree and Inverness was more than 50 hours. Two stations registered over 200 hours, viz. Benbecula (204 hours) and Tiree (203). Other good records were Lossiemouth (197), Grimsetter, in Orkney (197), Craibstone (192) and Arbroath (189).

Fog occurred in a few scattered places on 11 days in all and winds rose to gale force in some coastal districts on the 8th-11th.

Meteorological Notes (*continued*).**SEPTEMBER 1950.**

The month was the wettest September in Scotland for over 70 years, only a few areas having less than twice the normal rainfall. It was decidedly dull practically everywhere while mean temperatures were mainly below average. Only local fog was reported but much stormy weather occurred and there was a high frequency of thunder.

September's exceptionally heavy rains caused flooding in many parts of Scotland, notably in the West and South-west on the 6th and along the Doon Valley on the 18th. In the West there were at most only a few dry days and many totals for the month broke long-standing records for September. In Rothesay's 150 years of rainfall recordings last month's total (11.43 inches) exceeded the former September record of 8.90 inches (in 1872). For the month 30.41 inches fell at Loch Sloy Dam, 25.35 at Kinlochquoich and 20.55 at Glenquoich. Most observers registered at least twice the normal amounts while a few in Angus, Fife and the South-west even more than thrice the normal. Falls for 24 hours greater than 2 inches were reported on 13 different days. The 6th and 24th were exceedingly wet days. On the 6th, 3.33 inches fell at Laggan of Dee, 3.05 at Forrest Lodge and 2.92 at Glenlee—all in Kirkcudbrightshire. On the 24th, 3.13 inches were recorded at Dundee Harbour.

Only at Lerwick and in coastal districts of Angus, Fife and Banff were sunshine returns in excess of average. Elsewhere the month was a very dull one, some places having a shortage of 30-40 hours. Renfrew had 9 sunless days and on 7 other days the sun shone for less than 3 hours. There were, however, a few fine sunny days when the duration exceeded 9 hours. The best records were Leuchars (145 hours), St. Andrews (143) and Dundee (136). A number of stations registered less than half these aggregates, notably Fort William (51), Onich (55) and Duntuilml, in Skye (59).

Mean temperature (52.9° F.) was slightly below average. Most observers recorded their highest readings between 60° and 70° though at Duntuilml (Skye) and at Dalwhinnie the thermometer never attained 60°. On the 4th shade temperature rose to 71° at Gordon Castle, 70° at Lossiemouth and 69° at Banff and Turnhouse (Edinburgh). The last ten days were the coolest of the month. On the 24th screen minima fell to 30° F. at Glenlivet and to 31° at Balmoral. Ground frosts occurred locally and were in general not severe.

Much interest was aroused by the appearance of the blue sun and blue moon on September 26th.

510-517, 520,
521, 527

IX. DISEASES OF THE DIGESTIVE SYSTEM

Diseases of Buccal Cavity and Oesophagus—

530-535

Diseases of teeth and gums -

536-538

Other diseases of buccal cavity -

539

Diseases of oesophagus -

Diseases of Stomach and Duodenum—

540

Ulcer of stomach -

541

Ulcer of duodenum -

543

Gastritis and duodenitis -

542, 544-545

Other diseases of stomach -

550-553

Appendicitis -

560-561

Hernia -

Other Diseases of Intestines and Peritoneum—

570

Intestinal obstruction -

571.0

Gastro-enteritis between 4 weeks and 2 yrs.

571.1

Gastro-enteritis over 2 years -

572

Chronic enteritis and ulcerative colitis -

576

Peritonitis -

573-575, 577,

578

Other diseases of intestines and peritoneum

Diseases of Liver, Gall Bladder and Pancreas—

580

Acute yellow atrophy of liver -

581

Cirrhosis of liver -

582, 583

Other diseases of liver -

584

Cholelithiasis -

Other diseases of gall bladder and bile ducts -

585, 586

Diseases of pancreas -

587

Diseases of pancreas -

X. DISEASES OF THE GENITO-URINARY SYSTEM

Nephritis and Nephrosis—

590

Acute nephritis -

591

Nephritis with oedema, incl. nephrosis -

592

Chronic nephritis -

593

Nephritis not specified as acute or chronic

594

Other renal sclerosis -

Preliminary Return for the year 1950

This Report deals primarily with the statistics for the fourth quarter of the year 1950 but includes a short preliminary return of the general vital statistics for the country for the whole year. A full report of the vital statistics of the year will in due course be incorporated in the Ninety-Sixth Annual Report. The figures given for the year in the present Report, may, however, be accepted as substantially accurate, although they are provisional and will be superseded in due course by those appearing in the Annual Report.

The estimated population of Scotland at 30th June 1950 was 5,174,500.

The main features of the vital statistics for the year 1950 are as follows:—The birth-rate is the lowest since 1945, but slightly higher than the quinquennial averages from 1936–1945. The general death-rate is a little above that for 1949 and slightly above the average. The infant death-rate and the maternal mortality are the lowest recorded. The marriage-rate is lower than in 1949 but is above the pre-war average (1934–38).

There is a marked downward trend in mortality from tuberculosis both in the pulmonary and in the non-pulmonary forms.

Live births registered during the year 1950 numbered 92,528, being equal to a rate of 17·9 per thousand. This rate is 0·6 below that for 1949 and 1·5 below the average for the five preceding years. It was 17·7 in 1938, 18·5 in 1944, 16·9 in 1945, 20·3 in 1946, 22·0 in 1947, 19·4 in 1948 and 18·5 in 1949. The natural increase for the year, i.e. the excess of births over deaths, was 28,532 as compared with the average for the previous five years of 36,517. Still-births numbered 2,558 as compared with 2,666 in 1949, representing a rate of 27 still-births per 1,000 of all births (live and still), the same as that in 1949. Illegitimate live births numbered 4,833 as compared with 5,223 in 1949. This is equal to a rate of 5·2 per 100·live births. The proportion of male live births per 1,000 female was 1,070, being 12 more than in 1949.

Marriages registered during the year numbered 40,478. The marriage-rate, 7·8 per thousand, is 0·3 below that for 1949. It is 0·9 below the five years' average (1945–49) but 0·2 above the pre-war average (1934–38). 33,216 of the marriages were solemnised by Ministers of religion, 33,077 having been preceded by proclamation of banns or by publication of notice, and 139 authorised by Sheriff's licence in accordance with the provisions of the

EXPLANATORY NOTES

Birth, Death and Marriage Rates.—These rates are calculated on the estimated home population of Scotland, or of the local area concerned, as the case may be. Prior to the first quarter of 1950, as indicated in the relative Reports, they were variously calculated with reference either to what was referred to as a total population or to a civilian population. The estimated home population is the civilian population (including members of the Mercantile Marine at home and abroad) plus members of the armed forces stationed in the country.

Average Rates.—Unless otherwise indicated, average rates referred to in this Report are the averages of the rates in the previous five years.

Causes of Death.—In this Return these are classified in accordance with the Sixth Revision of the International Lists of Diseases and Causes of Death. In Returns from 1941 to 1949 inclusive, classification was in accordance with the Fifth (1938) Revision.

In comparing the number of deaths by cause, and death-rates in 1950, with those of previous years, allowance has been made for this change of classification.

The effect of the change will be shown in detail in the Annual Report for 1950.

Usual Residence.—Births, Still-births and Deaths are corrected throughout this Return by transfer to usual place of residence if in Scotland but Marriage figures are as registered.

* Including erysipelas, septicaemia, dysentery, acute poliomyelitis and lethargic encephalitis.

Marriage (Scotland) Act, 1939. 7,254 marriages were contracted in the offices of authorised Registrars. 8 were registered on the authority of Extract Decree of Declarator pronounced in the Court of Session. Civil marriages comprise 17·9 per cent. of the total marriages.

Deaths from all causes numbered 63,996 and equalled a death-rate of 12·4 per thousand. It is 0·1 above the rate for 1949 and 0·1 above the five years' average.

Deaths of children under one year numbered 3,569, representing an infant mortality rate of 39 per thousand live births. This rate is 2 below that for 1949 and 11 below the five years' average. It is the lowest Scottish infant mortality rate yet recorded. The neo-natal rate (deaths of infants under one month) was 23 per thousand—the same as that for 1949 which was also the lowest rate recorded for Scotland. Among legitimate children the infant mortality rate was 38 per thousand, 2 less than in 1949, while among illegitimate children it was 54, 16 less than in 1949.

Table IIA shows the total number of deaths registered in Scotland during the year, classified by sex and cause, and also the number by age and cause. Compared with the previous year there is a decrease in the number of deaths at each age group up to and including 35–44 even although the total deaths were slightly more than in 1949. This difference is seen in the increased deaths in each age group after 35–44. The greatest relative decrease is found in the groups 15–24, 5–9 and 10–14, and the greatest increase in groups 85 and over and 75–84. In 1950 the death-rate at ages under 44 was 2·87 per 1,000, and at ages over 44, 32·24. In 1949 the corresponding rates were 3·23 and 31·46.

The number of deaths from the principal epidemic diseases* was 527, 45 fewer than in 1949. The death-rate was 10 per 100,000. The largest decrease was in the number of deaths from whooping-cough which was 61 compared with 96 in 1949. Deaths from diphtheria totalled 3, the smallest ever registered in Scotland. In 1940 the number was 676 and in 1941, 517. Deaths from scarlet fever numbered 4, being the lowest recorded figure. From cerebro-spinal fever the number was 35, an increase of 3 compared with the previous year. The deaths from acute poliomyelitis and polio-encephalitis numbered 63, an increase of 51 from the previous year. In 1947 the number was 129. The average for the years 1942–46 was 13. No deaths occurred from typhoid fever (including paratyphoid) in 1950. There were 2 in 1949.

Deaths from tuberculosis (all forms) numbered 2,779, a decrease of 709 compared with 1949. The death-rate is 54 per 100,000, being 21 below the average of the preceding five years. Deaths from respiratory tuberculosis numbered 2,443, 645 fewer than in 1949. The rate was 47 per 100,000, being 15 below the five years' average. The deaths from non-respiratory tuberculosis were 64 fewer than in 1949 equivalent to a rate of 6 per 100,000 which was 6 below the five years' average.

Deaths from syphilis (including parasymphilitic diseases) numbered 170, a decrease of 2 compared with the previous year.

Deaths from malignant disease numbered 10,022 and were 148 more than in 1949. Compared with the average they were 548 more.

Deaths from heart disease numbered 20,300 and were 166 more than in 1949. They account for 32 per cent. of all deaths. This is the largest number of deaths ever recorded from heart disease.

* See note on page 2.

From cerebral hæmorrhage and allied conditions deaths numbered 8,727, from nephritis 698, and from old age 1,283.

Deaths from diseases of the respiratory system (not tubercular or malignant) numbered 5,010, 80 fewer than in 1949. They included 2,255 from bronchitis and 2,124 from pneumonia, the rates per 100,000 being 44 and 41 respectively. Compared with 1949 the number from bronchitis was 100 more and from pneumonia 160 fewer.

Deaths from diseases and accidents of pregnancy and childbirth numbered 106 as against 126 in the previous year. This represents a maternal mortality rate of 1·1 per thousand births (live and still). This rate is 0·2 below that for 1949. It is 0·9 below the five years' average. The rate is less than half that experienced as recently as 1945.

Deaths from congenital debility and diseases of early infancy numbered 2,405 and were 53 less than in 1949.

Deaths attributed to violent causes numbered 2,603 and are 31 more than in 1949. Of these 269 were ascribed to suicide, 530 to road transport accidents and 1,804 to other forms of violence; the numbers from these causes in 1949 were 298, 517 and 1,757, respectively.

These are the principal features brought out by Table IIA. In addition it may be noted that deaths from diarrhœa have decreased to 511. As compared with 1949 deaths from diabetes showed an increase from 536 to 565, gastric and duodenal ulcer from 615 to 627.

In Table IA will be found the main figures and rates for Scotland, Large Burghs and Remainder of Counties, with individual figures for each Large Burgh.

Quarterly Return of the Births, Deaths and Marriages registered in Scotland for the Quarter ended 31st December 1950

(The averages quoted, except where otherwise specified, are for the corresponding quarter of the immediately preceding five years, i.e. 1945–1949.)

Summary.—The birth-rate in Scotland in the fourth quarter of 1950 is 16·8 per 1,000 of the population. This is a lower rate than any experienced since the year 1945 and slightly below the 5 years' average of the fourth quarter before the war.

The marriage-rate is 6·8, which is lower than the rate in the fourth quarter of 1949 and lower also than the average of the five years before the war.

The death-rate is 13·1. It is above the average of the past five years.

The infant mortality rate, at 42 per 1,000 live births, is slightly below the rate of the fourth quarter of 1949, and, because of a continuing improvement year by year, is well below the average of the past five years.

The death-rate from all forms of tuberculosis at 51 per 100,000 is materially less than the rate of 63 per 100,000 in the fourth quarter of 1949. The improvement occurs principally in the respiratory forms of tuberculosis. The rate for other forms is a little below what it was in the previous year. For both forms the rate is lower than the average of the preceding five years.

In a total of more than 22,000 maternities in the fourth quarter of 1950 the number of mothers who died was 23.

Live Births.—The 21,844 births in the quarter under review are 852 fewer than in the corresponding quarter of 1949. The rate per 1,000 population is 16·8, being 0·6 below the rate for the corresponding quarter of 1949 and 2·0 below the average. The birth-rate in the aggregate of large burghs is 16·5 that for the rest of Scotland being 17·1. In individual areas the rate ranged in burghs from 24·9 in Port Glasgow, 21·1 in Coatbridge and 19·1 in Clydebank to 13·8 in Falkirk, 13·0 in Dunfermline and 12·1 in Rutherglen. In counties exclusive of large burghs it ranged from 21·5 in West Lothian, 19·1 in Moray and in Wigtown and 19·0 in Lanark to 13·2 in Selkirk and in Berwick, 12·6 in Bute and 11·0 in Peebles.

The proportion of illegitimate births, 5·0 per cent., is the same as that for the fourth quarter of 1949 and 0·8 below the average.

Of the 21,844 births registered, 11,269 were of male children and 10,575 of female children, being 1,066 male births per 1,000 females. Births registered in October numbered 7,712, in November 6,923 and in December 7,209, the equivalent birth-rates being 17·6, 16·3 and 16·4 respectively.

Still-Births.—The number of still-births registered during the quarter was 599 and is equivalent to a rate of 27 per 1,000 total births (including still-births).

Marriages.—The number of marriages registered, 8,825, is 250 fewer than for the fourth quarter of 1949. The rate per 1,000 population was 6·8. It is 0·2 below that for the corresponding quarter of 1949, and 0·8 below the pre-war five years' average (1934–1938). The rate in the aggregate of large burghs is 7·7 compared with 5·7 for the rest of Scotland. In individual areas the rate in the large burghs ranged from 14·8 in Inverness, 11·3 in Perth and 11·2 in Arbroath to 5·1 in Airdrie, 4·9 in Port Glasgow and 4·7 in Dumbarton. In counties exclusive of large burghs it ranged from 9·0 in Orkney, 8·3 in Moray and 7·6 in Kirkeudbright to 4·0 in Sutherland, 3·7 in Ross and Cromarty and 3·1 in Selkirk.

Of the 8,825 marriages registered, 1,772 were civil marriages contracted in the office and in the presence of certain specially authorised Registrars in accordance with the provisions of the Marriage (Scotland) Act, 1939. The remainder, 7,053, were solemnised by a Minister of religion. In the corresponding quarter of 1949 civil marriages numbered 1,731 and those with a religious ceremony numbered 7,344.

Marriages registered in October numbered 2,951, in November 2,224 and in December 3,650, the equivalent marriage-rates being 6·7, 5·2 and 8·3 respectively.

Deaths.—Deaths registered during the quarter numbered 17,022, and equalled a death-rate of 13·1 per 1,000 population. They are 1,149 more than were registered in the fourth quarter of 1949. The rate is 0·9 above that quarter, and 0·9 above the five years' average. The death-rate in the aggregate of large burghs is 13·5 compared with 12·6 in the rest of Scotland. The rate in individual large burghs ranged from 14·6 in Dundee, 14·5 in Kirkealdy and 14·3 in Rutherglen to 11·6 in Clydebank, 11·1 in Stirling and 10·2 in Dunfermline. In counties exclusive of large burghs it ranged from 15·7 in Zetland, 15·1 in Kinross and 14·8 in Berwick to 11·5 in Lanark, 11·0 in East Lothian and 10·9 in Stirling and in West Lothian.

Deaths registered in October numbered 4,880, in November 5,589 and in December 6,553, the equivalent death-rates being 11·1, 13·2 and 14·9 respectively.

Infant Mortality.—Deaths of children aged under one year numbered 911 and are equivalent to an infant mortality rate of 42 per 1,000 registered live births. This rate is 2 below that for the corresponding quarter of 1949 and 10 below the five years' average. Among legitimate children the mortality was 41 per 1,000 births and among illegitimate children 63.

The infant mortality for the large burghs was 44, while for the rest of Scotland it was 39. In the large burghs individually it ranged from 95 in Port Glasgow, 78 in Coatbridge and 52 in Glasgow to 25 in Arbroath, 23 in Inverness and 6 in Perth. There were no deaths of children under one year of age in Dunfermline and Rutherglen. In counties exclusive of large burghs it ranged from 125 in Sutherland, 65 in Kinross and 53 in Caithness to 26 in East Lothian, in Kincardine and in Inverness, 24 in Nairn and 20 in Dumfries. No deaths of children under one year of age occurred in Bute.

The neo-natal rate (deaths of infants under one month) was 25 per 1,000 live births and is 1 above that for the corresponding quarter of 1949.

Causes of Death.—*Principal Epidemic Diseases.*—There were 98 deaths registered during the quarter which were attributed to the principal epidemic diseases, being 28 more than in the fourth quarter of 1949. The death-rate for this group is 8 per 100,000 of population. The average rate for the corresponding quarter of the five preceding years is 9. These deaths include 13 from cerebro-spinal fever, 16 from whooping-cough, 1 from diphtheria, 64 from influenza and 4 from measles. No deaths occurred from typhoid fever (including paratyphoid) or from scarlet fever. In the large burghs the highest rates were 28 in Aberdeen, 15 in Rutherglen and in Dumfries and 12 in Paisley. In counties exclusive of large burghs the highest were 45 in Nairn, 25 in Aberdeen and 24 in Wigtown.

Tuberculosis.—The 669 deaths from all forms of tuberculosis are 157 fewer than in the fourth quarter of 1949. Of them 605 were ascribed to tuberculosis of the respiratory system and 64 to tuberculosis of other organs. The death-rate from all forms of tuberculosis is 51 per 100,000, that from respiratory tuberculosis being 46. The former rate is 12 below that for the corresponding quarter of 1949, and the latter is 11 below. The rates from all forms and from the respiratory form are respectively 21 and 16 below the five years' average.

Malignant Disease.—Deaths from this cause numbered 2,578, and equal a rate of 198 per 100,000. These deaths are 24 more than in the fourth quarter of 1949, and the rate is 11 above the five years' average.

Respiratory Diseases.—Deaths from bronchitis numbered 758 and from pneumonia 597. The corresponding death-rates per 100,000 population are 58 and 46. The average rates for the corresponding quarters of the previous five years are 45 and 48 respectively.

Maternal Mortality.—Deaths of mothers from diseases and accidents of pregnancy and childbirth numbered 23 and are equal to a rate of 1.1 per 1,000 live births. This rate is 0.1 below that for the corresponding quarter of 1949 and 0.8 below the five years' average. Including still-births the maternal death-rate is 1.0 per 1,000.

Violence.—Deaths from violence numbered 685, and are equivalent to a death-rate of 53 per 100,000. In the fourth quarter of 1949 the number was 623 and the rate 48. Of the total deaths assigned to violence 126 were attributed to road transport accidents, a decrease of 23 compared with the corresponding quarter of 1949.

For comparative purposes the accompanying table is given showing the death-rates from several important causes in the fourth quarter of 1950 and in the corresponding quarter of 1949 with the average rates for the fourth quarter of the years 1945-1949.

CAUSE OF DEATH.	Death-rates per 100,000 Population.		
	1950 Fourth Quarter.	1949 Fourth Quarter.	Average rates for Fourth Quarters 1945-1949.

NEW CLAIMS TO SICKNESS BENEFIT UNDER THE NATIONAL INSURANCE ACTS.

The number of new claims to sickness benefit under the National Insurance Acts made at local offices of the Ministry of National Insurance in Scotland during the 13 weeks ended 2nd January, 1951, was 203,847. The number of such claims made at the sixteen principal towns is shown below.

New Sickness Benefit Claims* in the 13 weeks ended 2nd January 1951.		New Sickness Benefit Claims* in the 13 weeks ended 2nd January 1951.	
Town.		Town.	
1. Glasgow . . .	54,432	9. Kirkcaldy . . .	2,604
2. Edinburgh . . .	17,670	10. Coatbridge . . .	2,909
3. Dundee . . .	8,787	11. Kilmarnock . . .	2,906
4. Aberdeen . . .	11,990	12. Hamilton . . .	2,999
5. Paisley . . .	4,795	13. Ayr . . .	2,720

7. Motherwell and Wishaw . . .	5,244	15. Dunfermline . . .	3,112
8. Clydebank . . .	3,191	16. Perth . . .	2,393
			132,539

* These figures represent the number of new claims made at Ministry of National Insurance offices in the towns named, and include a number of claims made by insured persons resident in the landward area served by these offices.

METEOROLOGICAL NOTES

Supplied by the Meteorological Office, Edinburgh

OCTOBER 1950.

A mild Southwesterly type of weather marked the first fortnight but cold easterly winds followed. Though less wet than in September, the West again received considerably more than the normal rainfall. The East and South on the other hand were very dry. The greater part of Scotland had a dull month but some Northeast districts had their sunniest October for many years.

Mean temperature (48.0° F.) was about average, being higher than usual in the North and a little lower than average in the South. The 4th and 5th, with readings well above 60°, were the warmest days. On the 5th temperature in the shade rose to 66° at Gordon Castle, Banff, Edinburgh, North Berwick and Auchincruive. Much cooler weather set in on the 20th and a sharp snap occurred on the 26th–30th. Slight to keen night frosts were experienced in most places and some were severe at high level stations. The lowest minima were reported on the 29th, notably 18° F. at Dalwhinnie, 21 at Glenlivet and Braemar and 23 at Balmoral and Glengavel. Thermometers exposed on the ground registered about 20 degrees of frost at Dalwhinnie, Glenlivet and Glenlee.

Sunshine was plentiful along the coastal strip from Aberdeen to Inverness. The remainder of Scotland was rather dull though here and there totals exceeded average. The best records were Glenlivet (128 hours), Nairn (125), Forres (125), Craibstone (121), Dyce (120), Lossiemouth (118) and Gordon Castle (117). Amongst the poorest aggregates were Benmore (34), Fort William (51), Lerwick (52), Helensburgh (56) and Glasgow (58).

Throughout East and South Scotland precipitation was considerably below average, the greater part of this area having only about one half the normal amount and a few places only one quarter of it. To the West and North on the other hand rain fell nearly every day until the 20th giving a slight to moderate excess for the month. At Loch Sloy Dam total rainfall exceeded 20 inches. The 3rd, 9th and 16th were very wet days with falls for 24 hours exceeding 2 inches in places. Noteworthy amongst these were 3.76 inches at Glenquoich and 2.81 at Kinlochourn on the 3rd. Rather more than 2 inches fell at Conaglen and Glencoe Gardens on the 9th.

Snow, sleet and hail showers occurred locally in the first and last weeks. Very little thunder was reported but there was a high frequency of gales, though none was exceptionally severe. A good deal of fog occurred especially during the last ten days.

Meteorological Notes (continued).**NOVEMBER 1950.**

A cold unsettled month with mild periods in the first and second weeks. Precipitation was deficient except in Coastal areas of East Scotland where heavy rains on November 21st raised totals to well above the seasonal averages. There was more than the usual sunshine in most districts, Benbecula, Tiree and Eastern Stations having the best aggregates.

Mean temperature (40.0° F.) was below average for the first time in November since 1944. It was indeed the coldest November in Scotland for 25 years. Mean values were everywhere below average. At Glenbranter and Inverness the deficiency was 3° F. The opening four days and the 8th–10th (when temperature exceeded 50° in most places) were the mildest of the month. A reading of 54° was recorded at Turnberry and Fort William and in some Edinburgh districts on the 1st while Prestwick had 54° on the 3rd. Much colder weather came on the 14th–17th and there was another very cold spell from the 24th–28th. Day maxima failed to rise much above freezing at Braemar, Balmoral and Lerwick on the 16th while Glasgow and Dalwhinnie had low maxima on the 25th and 28th respectively. Severe night frosts occurred during both the cold spells, low minima being 14° F. at Braemar on the 17th and 18° at Peebles and Eskdalemuir on the 26th. On the ground, temperature fell to 10° F. (22 degrees of frost) at Glenlivet on the 14th, Braemar on the 17th and at Renfrew on the 25th.

There was a moderate to large excess in rainfall over East Scotland due largely to prolonged rain on the 21st when over 70 observers recorded an inch or more in 24 hours. Elsewhere, however, the month was mainly a dry one, many places having only 60–70 per cent. of average. In general precipitation fell on about 20 days. Western districts had a dry spell in the first week and practically all districts had little rain from the 22nd–26th. Wintry showers were frequent during the cold spells. Snow lay 2–3 inches deep at Braemar and Glenlivet on the 16th–18th. The wettest periods were the 7th–10th in the West and the 18th–21st in the East. The largest measurement for 24 hours on the 21st were 2.11 inches at Longformacus, 2.00 at Old Graden (Kelso) and 1.94 at Balerno. On the 9th, 1.94 inches fell at Achnacarry while Kinlochquoich had 2.30 inches on the 29th.

Sunshine totals tended on the whole to be above average. Tiree had an excess of 37 hours, Stornoway 17 and several stations in the East 12–15 hours. In a broad sense, there were 5–10 sunless days during the month and about 15 days when the sun shone for more than 3 hours. The sunniest places were Benbecula (87 hours), Tiree (83), Aberdeen (83), Dyce (81), Stonehaven (81), Montrose (81), Leuchars (81), Craibstone (80) and Arbroath (80). Five stations registered less than 40 hours viz. Fort William (29), Dalwhinnie (36), Braemar (36), Peebles (38), and Glasgow (38).

There was about the normal frequency of gales and of thunderstorms but fog was more prevalent than is usual in November. Dense fog delayed passenger services in several Clyde districts on the 17th and 27th.

Meteorological Notes (*continued*).**DECEMBER 1950.**

An exceptionally cold month with frequent and widespread snow. It was the coldest December in Scotland for 64 years. The greater part of the country was relatively dry and there were frequent sunny intervals.

Cold northerly winds kept temperatures very low throughout most of December, the only mild periods being the 6th–10th and around the 19th. On the 9th Fort William recorded 53° F., Achnashellach 52 and Greenock 52. Most places were 5–6 degrees colder than usual and at fifteen stations mean values were below freezing point, notably at Dalwhinnie (27.9), Glenmore Lodge, near Aviemore (28.9) and Balmoral (29.1). For the whole country the calculated mean temperature was only 33.8° F., nearly 6° below average and the lowest in December since 1886. At high level stations there were several spells of 2 or 3 days with continuous frost. The coldest weather came around the 15th and the 30th was equally cold in places. Day maxima rose to only 25° F. at Achnashellach on the 14th and to 20 at Dalwhinnie on the 30th. The lowest temperatures of the month were –1° F. at Dalwhinnie on the 15th and 5° F. at Glenmore Lodge and Glenlivet. This is the first time with a reading below zero since March 1947, and the lowest in December since 1937. Ground frosts were frequent and some were intense. On the 15th there were 41 degrees of ground frost at Dalwhinnie, 34 at Turnhouse Airport and 30 at Fort William.

A few coastal districts in the North had more than the normal precipitation but the Central Lowlands and the South generally had only one half and some Clyde districts less than one third of normal. Despite frequent snow (which was heavy at times on the 1st–3rd and 13th–17th) and appreciable rains on the 6th–10th and 19th, the month was the driest December for 17 years. Snow lay 20 inches deep at Glenmore Lodge from 1st–7th and at Dalwhinnie on the 3rd. Serious drifting and ice-bound roads dislocated transport services in many areas and it was reported that the Caledonian and Forth-Clyde Canals were frozen in places. Snow lay throughout the month at Glenmore and Glenlivet and it persisted in patches even in the Lowlands.

As regards sunshine, several districts recorded their highest December aggregates of recent years. At Oban there have been only two sunnier Decembers in the past 40 years while Ruthwell had its best December record for 33 years. On the other hand returns from a number of Moray Firth districts were poor for December and in other regions a few observers failed to record 20 hours for the month. The stations with the most sunshine were Arbroath (53), Prestwick Airport (53), Eskdalemuir (51), Carnoustie (51) and Kirkealdy (50).

There was about the usual frequency of gales in December but there was more fog than in any December since 1939. Only local reports of thunder were received.

TABLE I.—BIRTHS, STILL-BIRTHS, DEATHS AND MARRIAGES IN THE COUNTIES AND LARGE BURGH OF SCOTLAND, WITH THEIR EQUIVALENT RATES PER 1000 OF POPULATION—QUARTER ENDED 31ST DECEMBER 1950.

	Estimated Home Population 31/12/50.	Births (living children).		Mar-riages.	Deaths.		Rates per 1000 of Home Population.				Infant Mor- tality Rate per 1000 Live Births.	Still-births per 1000 Births (including Still-births).
